## About Me

Passionate, Curiosity and Task driven, developer. Eager to support and learn from companies - organizations that thirst for tackling crucial problems, scaling businesses and delivering great products, I am confident that working with companies such as these would also broaden my limited knowledge. I am proficient in both Dart and Java and I'm **HIGHLY** confident with my use of **Flutter** with about 2 years worth of experience. I also have sound knowledge of Native Android Development and use of tools like Git, GraphQL and most Firebase products.

## Work Experience

- Nov 2019 – **Junior Mobile App Developer (Flutter)**, WEPROTOTYPE TECH., Lagos.
- Aug 2020
  - Under a team lead, I worked on a Mobile app that verifies workers based on their previous employment, pictures (using facial recognition Api's - Amazon Rekognition) and flags them depending on their conduct in their previous work place or states any bad records. Displays their Biodata and previous employer.
  - Worked on a prototype of a Mobile app that helps students to learn from home, practice past questions and learn from tutorials in video form.
  - Collaborated with quality engineers, user research, product management, design and support teams to ensure quality in all phases of app development.
- Mar 2021 – **Mobile App Developer (Flutter)**, (FREELANCE).
- July 2021
  - Develop app prototypes for clients mostly for presentations or demos.
  - Worked with Tensorflow lite models to add Machine learning features to Flutter apps.
  - Provided expertise for projects requiring technical know-how, to depict better ways to scale products with the best tech stacks to use.
- August 2021 – **Mobile App Developer (Flutter)**, (DRUGSTORE.NG), Lagos.
- Present
  - CURRENTLY NOT DISCLOSABLE

## Other Projects

- Sept 2020 **Cryptocurrency Live Prices (Flutter app)**, PERSONAL PROJECT.  
Using the CoinMarketCap API, I created an app that shows cryptocurrency prices based on market cap, leveraging both Flutter and Native android code (Flutter module), I was able to make the main UI run only on Flutter code and a home screen widget run on Native code to display prices also.
- June 2021 **DevStatus (Flutter app)**, PERSONAL PROJECT.  
DevStatus is actually a clone of GitDevStatus (<https://gitdevstat.netlify.app>) but built with Flutter. This project provides a preview of a GitHub developer's account by search utilizing the GitHub Rest Api.
- July 2021 **LiteWeather (Flutter app)**, PERSONAL PROJECT.  
LiteWeather allows the user to know the weather forecast for the day with their location or by search. It also displays weekly forecast of a particular location.

## Technical Skills

Languages	Java, Dart
Programming skills	Debugging, Logical programming, Loosely coupled programming, Data Structures & Algorithms
Database	Cloud Firestore, Firebase Realtime Database
Framework	Flutter, Native Android
Recent Interests	Employing MongoDB, ExpressJs, NodeJs for Backend development
Tools	Git, GraphQL

## Certifications

- July 2018 **Java Course**, CODELAGOS, Lagos.  
Certificate of completing the CodeLagos Java Programming course.
- Feb 2021 **Easy to Advanced Data Structures**, UDEMY, By William Fiset.  
For completion of Data Structures course on Udemy.

Education

2017–2019 **YabaTech, Lagos**, *National Diploma, Mechanical Engineering.*
